

SAYAN GHOSAL

Cambridge * ghosal@broadinstitute.org * <https://sayangsep.github.io> * LinkedIn * 443-531-5268

PROFESSIONAL SUMMARY

- Computational scientist with a passion for integrating complex statistical models with genomic knowledge to provide insight into disease mechanisms.
- Contributions include novel Bayesian and machine learning models providing mechanistic insights into complex disorders like Alzheimer's, Autism, and Schizophrenia.
- Highly collaborative and motivated to drive new research endeavors in the intersection of methods development and biological discovery.

ACADEMIC BACKGROUND

Johns Hopkins University , Baltimore, USA	
Ph.D. , Electrical and Computer Engineering	2023
M.S. , Applied Mathematics and Statistics	2021
Jadavpur University , Kolkata, INDIA	
B.E. , Electronics and Telecommunication Engineering	2017

PROFESSIONAL BACKGROUND

Computational Scientist, Broad Institute , Cambridge	<i>Present</i>
<i>Contributions: SV Discovery, Graph Based Sequence Alignments, Disease Association</i>	
AI Resident, Google X , Mountain View	<i>2022</i>
<i>Contributions: Genetics, LLM, Mixed Effect Modelling, Time Series Analysis, HPC</i>	
ML Intern, Siemens Healthineers , Princeton	<i>2021</i>
<i>Contributions: Graph Neural Networks, Contrastive Learning, Interpretability</i>	

SKILLS

Statistical Genetics	GWAS, Structural Variant Discovery, Mixed Linear Modeling, PRS Analysis, Finemapping
Statistical Modeling	Bayesian Variational Models for Summary Statistics, Latent Factor Modeling, Dictionary Learning
ML for Genomics	Convolutional Networks for Genotype Data, Pathway Analysis Using Graph Networks
Deep Learning	Contrastive Learning on Graphs, Transfer Learning, Transformers, Autoencoders, Graph Neural Networks
Model Interpretability	Motif Discovery, Bayesian Feature Selection, Attention Mechanisms, LASSO, Group-LASSO
Pipeline Development	Genomic QC, Data Cleaning, Benchmarking

RELEVANT EXPERIENCE

Broad Institute , Cambridge	<i>Present</i>
<i>Computational Scientist</i>	
Motif Driven Structural Variant Discovery	
<ul style="list-style-type: none">• Identifying structural variants from the graph representation of sequence alignments.• Finding novel motifs for complex genomic rearrangements.	

BEATRICE: Bayesian Fine-mapping from Summary Data using Deep Variational Inference

- Developed a deep Bayes variational approach to parse complex heritability resulting in 2.2 fold increase in power and coverage.
- Utilized machine learning with Bayesian inference to handle multiple causal variants and infinitesimal effects from non-causal variants.

A Biologically Interpretable and Non-linear Approach to Generate Polygenic Risk Scores

- Consolidated genetic risk along biological pathways to generate risk scores predictive of disorder.
- Embedded gene ontology in a graph to infer underlying processes and functions linked to disease risk prediction.

A Biologically Interpretable Graph Convolutional Network to Link Genetic Risk Pathways and Neuroimaging Markers of Disease

- Developed a novel geometric deep learning tool for whole-brain whole-genome analysis of schizophrenia.
- Collaborated with cross-functional teams of biologists, data scientists, and clinicians, which led to a future million-dollar grant, scholarships², awards¹, and two publications.

Multimodal Imaging Genetics Models for Biomarker Identification and Schizophrenia Risk Prediction

- Developed novel latent factor models utilizing autoencoder and dictionary learning to identify correlated brain and genetic networks from brain imaging and genetics study of schizophrenia.
- Received special mention in the Hopkins magazine and a best paper award³ at SPIE.

SUPERVISING ACTIVITY

- Advising a computer science graduate student on deep learning projects aimed to learn the longitudinal effect of genetic variations on morphological changes in brain regions of 1K Alzheimer's patients.
- Authored a senior author paper at the International Conference of the IEEE Engineering in Medicine and Biology Society.

HONORS AND AWARDS

¹ Organization for Human Brain Mapping awarded \$700 for noteworthy abstracts.	2023
² MINDS fellowship awarded \$30K for spring tuition.	2022
³ Best Paper Award, SPIE Medical Imaging (Image Processing Conference)	2021
⁴ MICCAI travel award of \$500.	2020
⁵ Dept. of Electrical and Computer Engineering, JHU, PhD fellowship	2017-2018
⁶ Mitacs Globalink Research Fellowship Award	2016

PATENTS

Ghosal, S., Jacob, A. J., Sharma, P., & Gulsun, M. A. (2023). Subpopulation Based Patient Risk Prediction Using Graph Attention Networks. US Patent App. 17/647,613.

INVITED SEMINARS AND TALKS

Title: Benefits of Deep Learning to Parse Complex Genetic Architectures to Provide Mechanistic Insights

MIT (Host: Manolis Kellis)

2023

Title: Deep Imaging Genetics to Parse Neuropsychiatric Disorders

Regeneron (Host: Yu Bai)

2023

Google-Genomics, Google Health (Host: Farhad Hormozdiari)

2022

Title: Biologically Inspired Regularization Models Integrating Multimodal Data to Parse Neuropsychiatric Disorders.

ECE Seminar Series (Host: Archana Venkataraman)

2022
